This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. NOTICE TO THE READER.

THE preparation of Bibliographical Indices was one of the original objects proposed by the New Sydenham Society, and the Council has frequently had under consideration the propriety of undertaking an Index to the Medical Journals of this country. It has been deterred, however, by a knowledge of the great size to which such a work must run, and of the time and expense which must be involved in its preparation. It has also feared that its bulk and its enormous detail would interfere with its general usefulness, and that it would probably be found of value only by a few.

The Digest which is now published was offered to the Society exactly as it is printed. Dr. Neale's manuscript was complete, and it was neither practicable nor advisable to attempt anything in the way of alteration or amplification. It is not an exhaustive Index, since it comprises only a small number of journals, and, further, its author has exercised his discretion in selecting from them chiefly such subjects as appeared to be of especial interest to those engaged in practice. At the same time it has the advantages of having been compiled for his own use by a gentleman actively engaged in general practice, and in that the journals which it does include are those most widely diffused. Although by no means exhaustive, its references are yet exceedingly numerous, and are so classified as to greatly facilitate their employment.

After careful examination of Dr. Neale's work, the Council believed that it would be found very valuable, and that not only, nor perhaps chiefly, to professed students and authors, but to all whose libraries include any one of our chief leading English medical journals. In presenting it to the Members of the Society, the Council would recommend it on its positive merits as a condensed and available Digest of an important portion of medical literature, and would deprecate any comparison with what might be attempted in the way of an exhaustive index, which it does not profess to be.

AUTHOR'S PREFACE.

THE present work, which is the outcome of more than thirty years' continuous labour, undertaken solely for the author's individual benefit without any thought of future publication, professes to afford a means of ready reference to such discoveries, new doctrines, and different methods of treatment in each department of medical science as are likely to be of interest to the practitioner. The sources of information which are here especially represented are the "British and Foreign Medico-Chirurgical Review" from 1848 to 1876, "The Lancet" from 1837 to 1876, "The Medical Times and Gazette" from 1850 to 1876, "Ranking's Abstract" from 1845 to 1873, and "Braithwaite's Retrospect" from 1874 to 1876. Three of the serials above named consist chiefly of Reviews of Books and Abstracts of Papers culled from all English and Foreign medical works, and thus represent to a considerable extent the most important contributions to the "British Medical Journal," "The Practitioner," "The Medical Press and Circular," "The Medical Record," "The Examiner," "The Doctor," "The Obstetrical Journal," "The Edinburgh and Dublin Medical Journal," and other medical books, journals, and hospital reports.

Week after week cases full of interest, observations of the greatest value, modes of treatment applicable to a variety of circumstances, are found in the pages of such publications. These are read and appreciated at the moment, but memory fails to recall them when needed, and much valuable time is often lost in searching back numbers and wrong volumes for what, after all, will most probably be missed.

The present volume does not profess to be a full index to the works

named, for it is both more and less; *more*, in that it gives not merely the titles of the papers, but often twenty or thirty references to the text of a single lecture (such for example as Hilton on Rest, and Dr. B. Sequard's suggestive Lectures); and *less* in that it does not notice a number of articles that have no direct practical interest.

The arrangement of a work so voluminous and peculiar has been a difficulty, but this is met by a very copious index, containing more than 9,000 references, while the book itself has probably over 90,000 distinct entries.

The original manuscript contained 1,879 pages, each page being as a rule divided into six divisions, in a few instances twelve, but many blanks were left for future entries. In the book as printed, each central number (*e.g.* **713**) is identical with a page of the manuscript volume, and the side figures (*e.g.* **1, 2, 3,** etc.) with the divisions. The apparent peculiarities and irregularities of the notation were caused by the circumstance that in some subjects the references rapidly accumulated, whilst in others they remained but few. To have copied the original manuscript with all its vacant spaces would have made the volume too bulky, while, on the other hand, to rewrite the whole, entailing, as it must have done, the renumbering of each individual reference, would have been a task too Herculean to undertake without an equivalent advantage. The Index is really the key to the whole work, and has been made as full and comprehensive as possible. Any idea of complexity of plan will, it is believed, disappear if the reader will bear in mind, as just said, that the Index is the key to the whole. *The Index* must be referred to first, when by its aid any subject will be at once found (*e.g.*, PERTUSSIS 713:1). Having thus got a clue to the general subject, the reader will in the headings in smaller capitals (*e.g.*, TAR VAPOUR 351:5) find reference to each subdivision of it, and, lastly, indication of the page of the publication where the subject is treated. The reference in brackets, *e.g.* (351:5), indicates that under the section **351** and in subdivision **5** more information regarding TAR VAPOUR will be found.

That no mistakes have crept in amongst such a mass of figures is not to be expected; but that they are few in number, constant reference has

proved. The author will feel obliged if informed of any errors that may be detected, and also for any hints that may make a future edition more useful to the profession.
